

## Field Asset Tracker™

### AFFORDABLE GPS ASSET TRACKING

Field Asset Tracker gives you GPS visibility into where your assets are. You'll reduce loss and theft of your valuable assets. Our rugged, ultra-long battery life tracking devices and web-based Command Center make it easy to get started. Contact us now for more info.

- > Know where your assets are at all times
- > Choose from daily or 10 minute location reporting
- > View all assets and zoom to specific items on a digital
- > Reduce loss and theft of assets, trailers and equipment
- > Easy to install, rugged, weatherproof tracking units
- > Alerts when items are moved or leave an area you set
- > Full location history and reporting
- > Track assets in the same system you use for vehicle and smartphone tracking

### > FEATURES

- **GPS Asset, Equipment & Trailer** – Tracking devices on your field assets send out “pings” every ten minutes or every day telling you where they are. You'll immediately reduce lost items, mis-delivered equipment and identify theft of your valuable assets.
- **Full Mapping with Satellite Image View** – See live locations of all your assets on your choice of standard map or satellite view (we are a fully licensed user of Google enterprise mapping). Zoom to specific items and open windows to follow individual assets. Use Satellite image view to see exact location on jobsite.
- **Weatherproof, Long Battery Life GPS Tracking Devices** – Our affordable GPS tracking devices offer full IP-67 waterproof sealing and long battery life – up to seven years on a full charge and one report a day. Our devices come to you pre-configured so once they're installed you can start viewing your assets immediately.
- **Asset History “Breadcrumbing”** – Sometimes where an asset has been is as important as where it is. Field Asset Tracker's breadcrumbing feature allows you to review asset history for better understanding of field activity and identify any unauthorized equipment or asset use.
- **“Geofences” with Alerts** – Create custom boundaries around locations and know when your assets enter or leave them with real-time alerts by email and text message. Set up circles by distance or draw your own polygons to create custom geofences.

- **Real-Time Alerts** – Field Asset Tracker empowers you to set up real-time alerts for your assets that monitor for movement, geofences, and proximity to landmarks.
- **Import your “Landmarks” and “Points of Interest”** – Have a list of customers or service locations or jobsites? Import your “Points of Interest” and landmarks into Field Asset Tracker to see them on the map and use them to set up geofences and real-time alerts for more efficient operations and customer service.
- **Full Reporting/Business Intelligence** – Field Asset Tracker offers a wide range of reports that allow you to analyze field activity to improve field productivity including activity report, after-hours report, location history and more.
- **Intuitive Cloud-Based Tracking Command Center with Multi-Monitor Capabilities** – Field Force Tracker offers an intuitive and powerful Cloud-based Command Center that lets you take control of your assets. Run on one computer (or tablet) or use multiple monitors to focus on all assets and individual items. Set user permissions to view edit users and assets for complete control.
- **Mobile Asset Finder App** – Save time and effort for asset pickup and never lose sight of your assets with Field Asset Tracker's mobile web app. Use your iPhone, Android, Windows Phone or BlackBerry view and find assets on map from wherever you are.
- **Vehicle, Smartphone & Mobile Computer Tracking** – Track vehicles and field workers using the same system you use to track assets for total visibility into your field activities.
